RE: **Section 401 Water Quality Certification and Coastal Management Consistency
Concurrence**

National Pollutant Discharge Elimination System (NPDES) Vessel General Permit (VGP)
for Discharges Incidental to the Normal Operation of Commercial and Large Recreational
Vessels

Application No. WQC-200801845 (Inland)
Application No. WQC-200801846 (Coastal)

Pursuant to Section 401 of the Federal Clean Water Act (33 USC 1341), Water Quality Certification is hereby granted for activities conducted in accordance with the proposed United States Environmental Protection Agency VGP, and the Commissioner finds that the proposed activity is consistent with state water quality standards and is reasonably likely to have no more than minimal impact on water quality individually or cumulatively. Further, the Commissioner finds that the VGP is consistent with the enforceable policies of Connecticut's approved Coastal Management Program, pursuant to Section 22a-96(c) of the Connecticut General Statutes.

TERMS AND CONDITIONS

Section 401 Water Quality Certification granted herein is subject to the following conditions:

1. **Rights.** This certificate is subject to and does not derogate any present or future property rights or other rights or powers of the State of Connecticut, and conveys no property rights in real estate or material nor any exclusive privileges, and is further subject to any and all public and private rights and to any federal, state, or local laws or regulations pertinent to the property or activity affected hereby. This certification does not comprise the permits or approvals as may be required by Chapters 440, 446i, 446j and 446k of the Connecticut General Statutes.

2. **Expiration of Certificate.** This Section 401 Water Quality Certification shall be valid for five (5) years or until such time as the VGP issued by EPA on or about December 19, 2008 expires or is modified, suspended, revoked or reissued.
3. **Compliance with Certificate.** All work and all activities authorized herein conducted by the permittees in accordance with the VGP shall be consistent with the terms and conditions of this certificate. Any regulated activities carried out in a manner inconsistent with the Best Management Practices identified in the VGP constitute a violation of this certificate.
4. **Reliance on Application.** In evaluating the EPA's application for this certificate, the Commissioner has relied on information provided by the EPA. If such information subsequently proves to be false, deceptive, incomplete or inaccurate, this certificate may be modified, suspended or revoked.
5. **Best Management Practices.** In conducting the activities authorized by the VGP, the permittees shall employ all applicable best management practices, consistent with the terms and conditions of the VGP and this certificate as applicable.
6. **Ballast Water Management Requirements.** The ballast water management requirements in the Draft VGP section 2.2.3 shall be the minimum standard for covered vessels operating in Connecticut waters. All vessels covered by the VGP that have a ballast water treatment system installed for any reason, including but not limited to compliance with the conditions of any VGP 401 Water Quality Certificate issued by any other jurisdiction, or compliance with International Marine Organization (IMO) standards, shall utilize such treatment system to treat ballast water to the highest level afforded by such installed treatment system prior to discharge into Connecticut waters.
7. **Graywater Management Requirements.** Discharge of treated or untreated graywater to the waters of the state from any vessel covered under the VGP is prohibited.

The conditions of this Certification are needed to comply with the December 17, 2002 Connecticut Water Quality Standards adopted pursuant to Section 22a-426 of the Connecticut General Statutes and section 303 of the federal Water Pollution Control Act as amended. In accordance with 40 CFR 124.53 (e) (2), these conditions cannot be made less stringent and still comply with Connecticut's Water Quality Standards. Further, as part of Connecticut's certification of the draft VGP, DEP finds as follows:

1. The additional ballast water management requirements set forth as a condition of this certification are necessary to reduce the unintentional discharge of invasive species and disease organisms that have the potential to disrupt the ecological balance of Connecticut's waters and negatively impact the fish and wildlife resources of the State, as well as other states; and

2. The additional graywater discharge standards set forth as a condition of this certification are necessary to reduce nutrient inputs from vessels covered by the VGP to impaired waters of the state and to support the No Discharge Area designation of state waters pursuant to Section 312 (f) (3) of the federal Water Pollution Control Act as amended.

Issued by the Commissioner of Environmental Protection on 10/22, 2008.

Gina McCarthy
Commissioner
